Using MKTEX
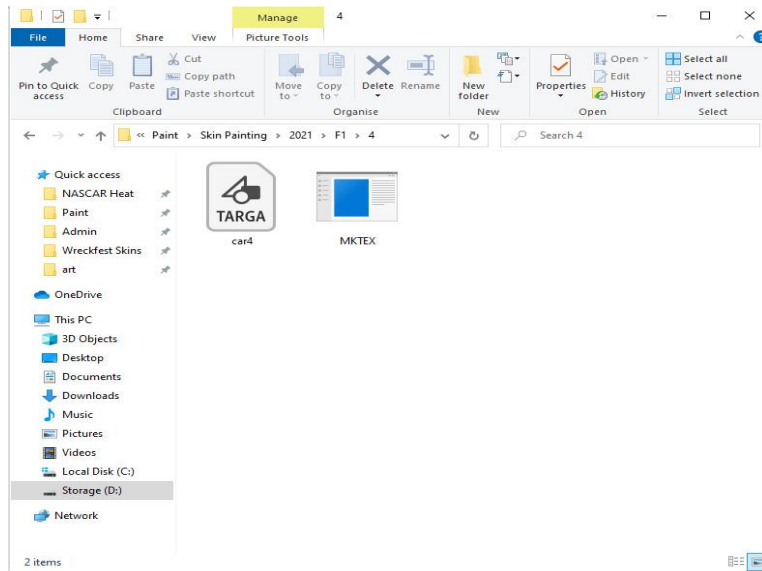

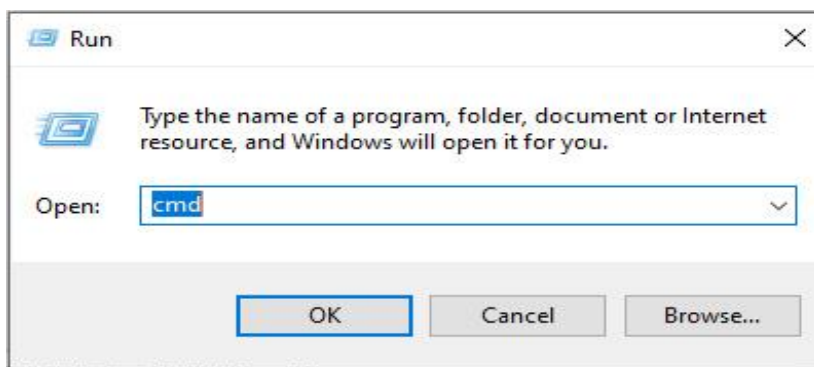

This is a short tutorial on how to use MKTEX to convert .tga to .tex

First of all make a folder up with the psd and tga of the skin you are converting and then add the MKTEX program

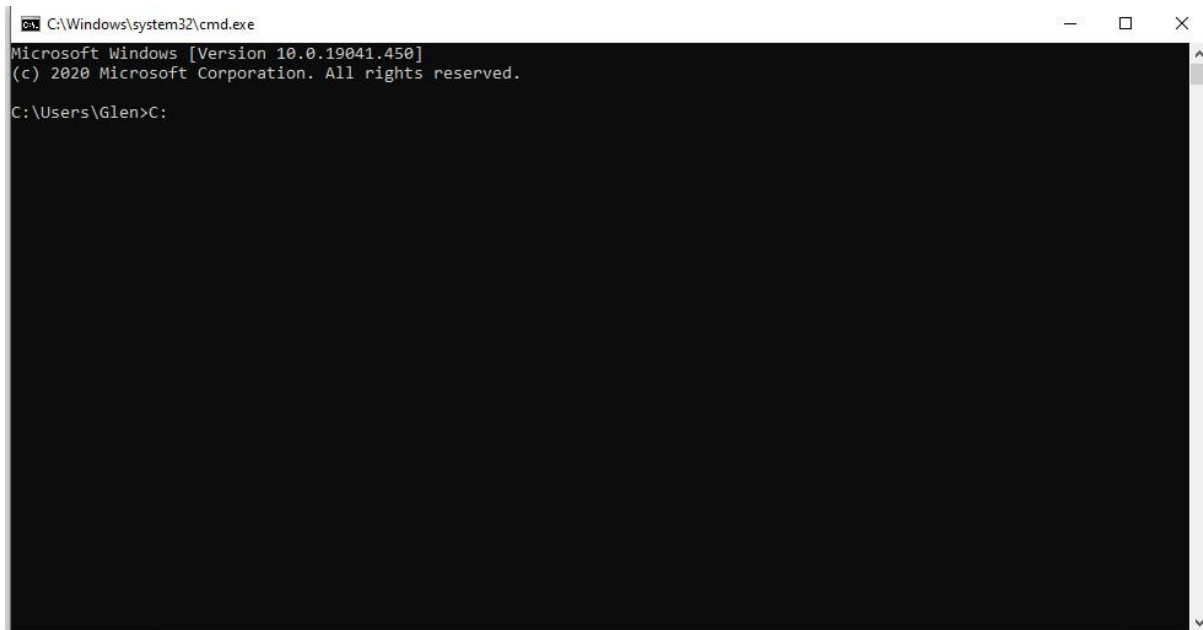

Then press the windows button and r at the same time

This open up a box. Type cmd into the box and then ok

This opens up a DOS box
Type in C: and then press enter

Then type cd then a space
The go to the folder where your .tga is stored and copy the directory and then paste it into the Dos Box

Then press enter

Then type mktex then a space the car4.tga then a space then car4.tex and press enter

The .tex file should now appear in the folder that you have your .tex and mktex saved in
